Not illustrated. 1877 Excerpt: . . . the conclusion that the digit and 20-6 cubit were independent; if they had not been so, the digits forming integral parts of the cubit would certainly have been noted; but the cubit being decimally divided, as is seen in the list of examples of it, the 28 digits had so little connection with the decimal scale that they were apparently regarded as having nothing to do with each other. Thus ten of the eleven independent standards of measures, found inductively from the Egyptian monuments, are represented, on the cubit rods, or simply connected with those so shown: affording a very strong confirmation of the results in this case, where they can be tested by contemporary evidence. (46) The sceptres borne by officials on the early Egyptian tombs are worth notice. The usual length of the thin part is 64 squares of the canon of proportion, and...
