The four major

hypotheses expounding the origin of the moon are subjected to

the absolutes of classical physics. In conjunction, the causation

of twice-daily tides is on the agenda. While the premise may be

stated in a matter-of-fact manner, the inquiry promises to be a

white water adventure for those who wish to ride along with

the investigation. On the agenda are: volcanism, pressure

solids, differentiation of the moon/earth distances, the

causation of high and low tides, and the crossover of perigees.

Never heard of the crossover of perigees? Don't miss this

remarkable chapter. The untouched character of the moon's

surface will come as a surprise to the many that have been

swayed by erroneous reports attributing the topographical

features of the moon to impacting meteorites. A familiar

adage is applicable: NASA scientists could not see the forest for

the trees. The investigation deals with the mysterious cavities

and the intrinsically associated domical bulges and dome

excavations distributed across the near side of the moon. The

sequence of events responsible for the sensible features...

Reviews

Extensive information for book fans. It is written in basic words and never hard to understand. It is extremely difficult to leave it before concluding, once you begin to read the book.
