## Parasite-host interactions in estuaries

By Ferreira, Susana M. F.

Book Condition: New. Publisher/Verlag: Scholar's Press | Long-term survey of key macrobenthic species in a temperate eutrophic estuary and the influence of trematode parasites | Digenetic trematodes are important organisms in shallow-water ecosystems, being parasites of several other animals. These parasites may exert significant impact on the physiology of their hosts. Yet, they have rarely been taken into account in environmental studies. Trematodes are cryptic determinants of the population dynamics of their hosts, such as benthic organisms monitored in coastal systems, and their ecological repercussions are thus far unknown. In this work, the Mondego estuary is used as a model case, in a long-term study of how environmental factors (eutrophication and standard abiotic factors) are reflected in the distribution and dynamics of dominant benthic populations, such as the mud snail *Hydrobia ulvae* the isopod *Cyathura carinata*. The manuscript discusses the role of microphallid trematodes in explaining the irregular presence of *C. carinata* at seagrass meadows, where *H. ulvae* is a dominant species and all the elements needed to complete these parasites life cycles are present. It is concluded that unexpected animal responses to habitat modification, such as parasite-hosts interactions, should also be thoroughly considered in environmental management. | Format:...

### Reviews

*Merely no words and phrases to describe. I am quite late in start reading this one, but better then never. I found out this ebook from my i and dad encouraged this pdf to find out.*

-- **Hyman Auer**

*I actually started out looking over this publication. It can be writter in easy phrases and never difficult to understand. Your lifestyle span will probably be transform as soon as you comprehensive looking over this ebook.*
